Product Architecture Training

FileNet Content Manager 5.2.1

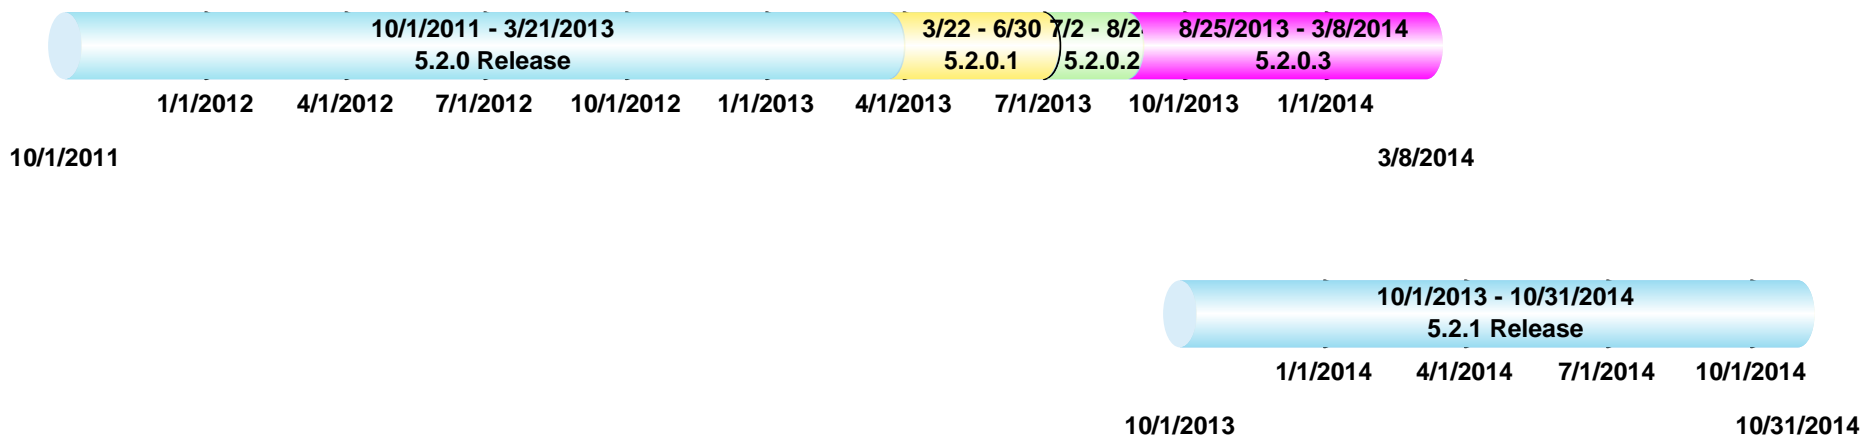

IBM Content Foundation 5.2.1

New Feature Overview

Perspective

5.2.0 Release

5.2.1 Release

USER EXPERIENCE

IBM Content Navigator

Desktop synchronization with ECM systems (P8)

Client goal

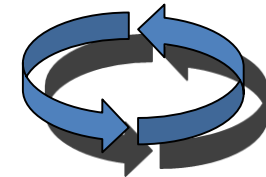

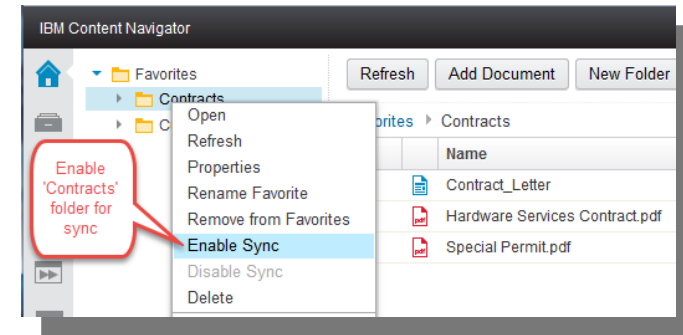

Provide a simple way for clients to sync and collaborate on documents right on their desktop/mobile device.

Client benefit

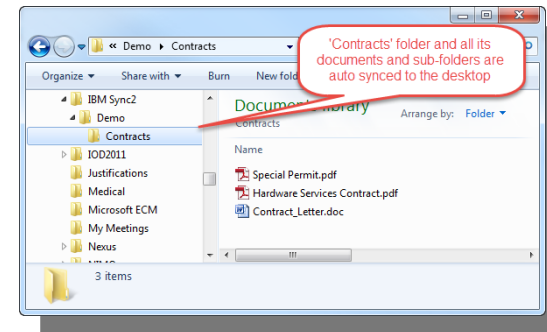

Provides easy file management ensuring you always have the latest documents on all your devices; both new documents and document updates are always managed in your FileNet repositories.

Provides two-way sync of repository objects (Documents, Folders and Teamspaces) for the Windows platforms.

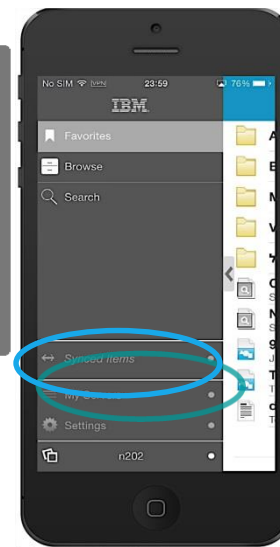

Browser

Workstation

Mobile

IBM Content Navigator

File Tracking for checked out/downloaded documents across ICN apps (P8 and CM)

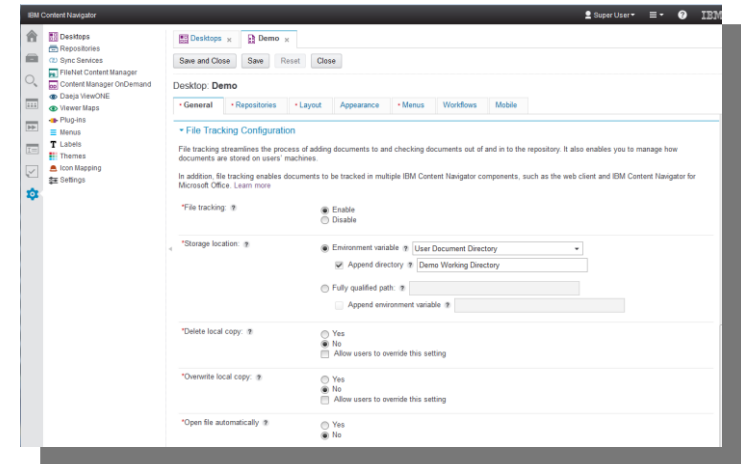

Client goal

Make it easier for end users to make updates to documents from either the web client and/or the Office integration

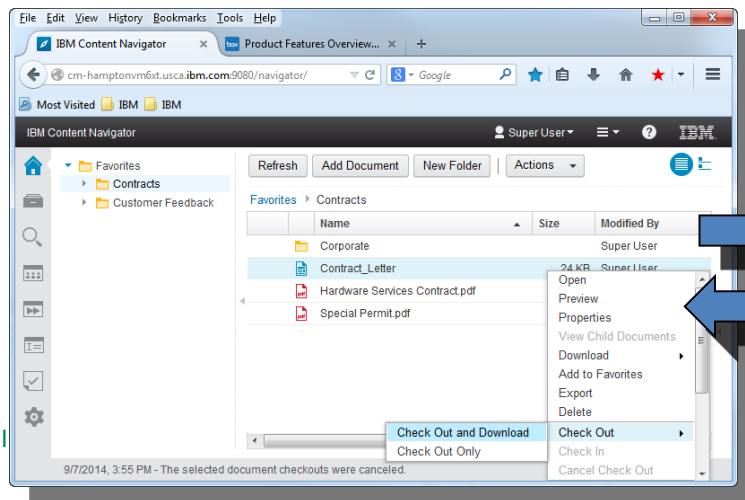

Client benefit

End users can checkout and download Office documents from teamspaces and cases and check their changes in from within Office seamlessly.

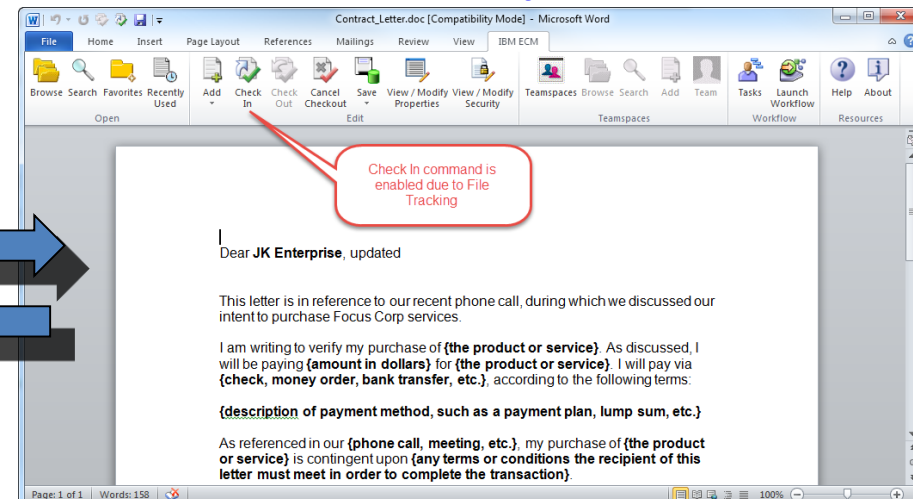

Central administration

Browser

MS Office Integration

IBM Content Navigator

Create and manage entry templates with integrated data layout editor (P8 and CM)

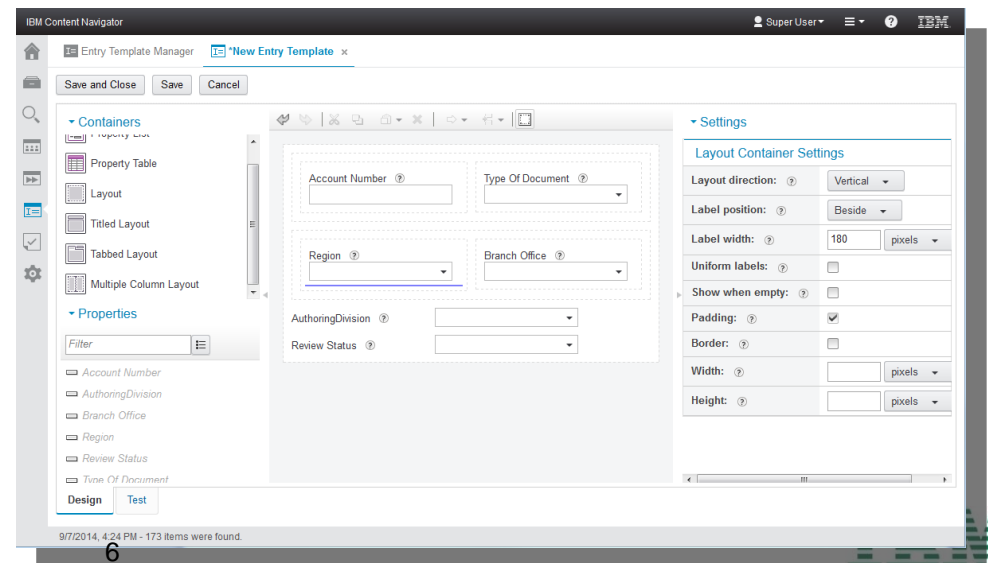

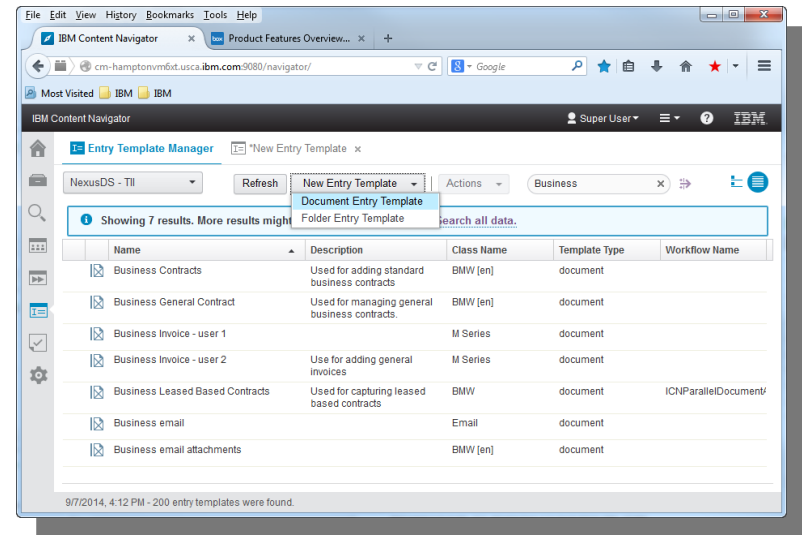

Client goal

Provide native support for managing entry templates including integration with property layout capability.

Client benefit

Business users can design entry templates for IBM ECM repositories to greatly simplify and streamline the content authoring experience for end-users.

Integrated property layout design enables the enterprise to easily customize the content authoring visual layout without requiring development effort.

IBM Content Navigator

SharePoint integration (P8/CM/CMOD/CMIS)

Client benefit

Seamlessly integrate Navigator features such as browse, search, and workflow into Microsoft SharePoint. Allows ICN users to copy content from IBM ECM back in to the SharePoint environment for continued collaboration.

Feature Highlights

- *SharePoint 2010 and 2013*
- *Installer provides 3 pre-configured Web Parts*
 - *Browse (P8, CM and CMIS)*
 - *Search (P8, CM, OD and CMIS)*
 - *Work Items (P8 and CM)*
- *ICN SharePoint plugin includes:*
 - *Desktop definition*
 - *Custom default portal menus*
 - *Layout (configure browse, search and work item features)*
 - *SharePoint theme*

IBM Content Navigator

Daeja ViewONE Virtual viewer (View P8/CM/CMOD/CMIS and Annotate P8)

Client goal

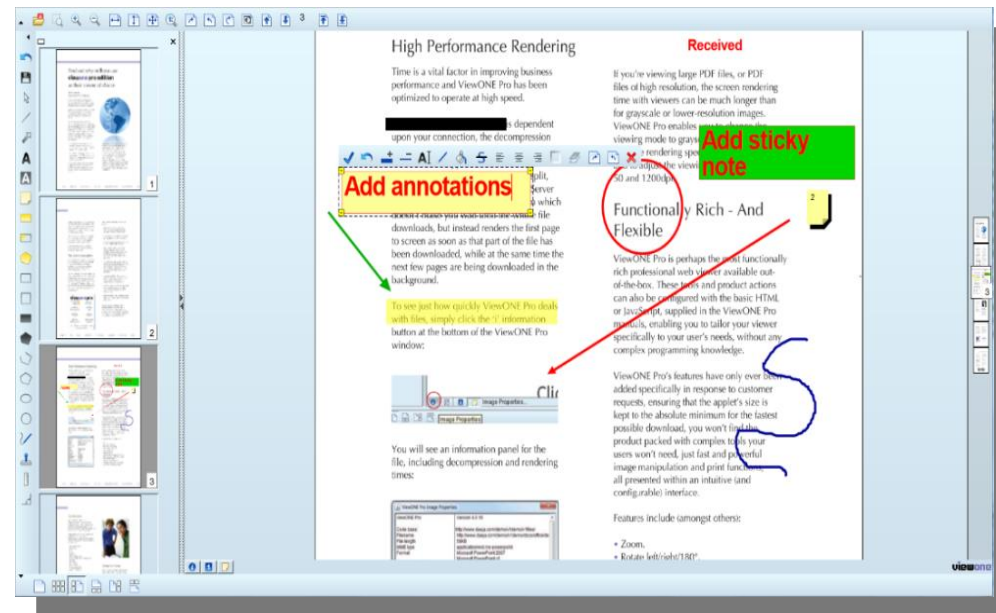

Provide a zero footprint viewing experience

Client benefit

Using the Daeja ViewONE Virtual viewer means that no application, plug-in, or applet must be installed or downloaded on the client. The native browser on the machine or device is enough to provide the viewing capabilities.

Feature Highlights

- DHTML 5-based
- Feature set is a subset of ViewONE Professional
- Available for all repositories
- Annotation support (P8 Only)
- Office module available as an upsell

IBM Content Navigator

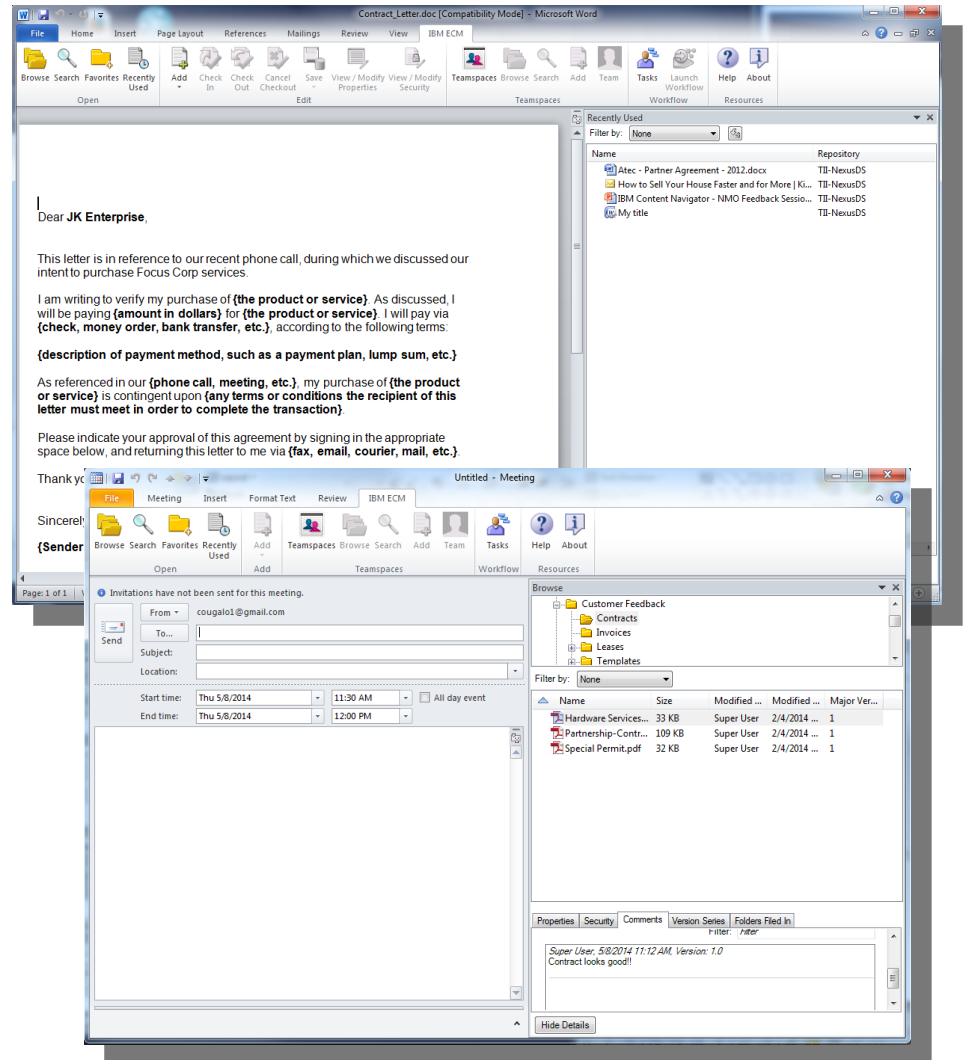

Integration for Microsoft Office

Client goal

Make it easier for end users to work with Microsoft Office based documents. Provide improved administration of Content Navigator for Microsoft Office

Feature Highlights

- *Productivity enhancements*
 - *Support saving document updates (P8 Only)*
 - *Recently used list*
 - *My Checkouts list*
- *Round trip content editing between Office and ICN web client*
- *Auto delete of opened documents after closing*
- *Expanding Outlook integration*
- *Outlook category to indicate when email is managed in repository*
- *Administration*
 - *Default download location*
 - *Configuration.ini settings moved to ICN administration UI*
 - *Centralize bootstrap settings*

ADMIN AND ARCHITECTURE

Report generation enablement

Easily deliver reports across content applications for IT, business users and applications

- New background data extraction jobs
 - Allows a query to be executed as a sweep process
 - Can extract millions of rows
- Use familiar CESQL for queries
 - Includes samples
- Aggregation functions
 - COUNT, MAX, MIN, SUM
- Custom functions
 - E.g. User display name lookup and Date formatting
- Data extracted to report tables
 - Optionally generate a CSV file for desktop app use

E.g. Document usage by

- User
- Class
- Storage Area
- Month
- Year

Row	User	Class	Count	Size	First Created	Last Modified
1	MickJagger	Invoice	3000	150000	2000-01-01 00:00:00.0	2014-05-18 22:33:44.766

12	CharlieWatts	Invoice	500	20000	2000-01-01 00:00:00.0	2014-05-18 22:42:25.988

Report generation enablement

Easily deliver reports across content applications for IT, business users and applications

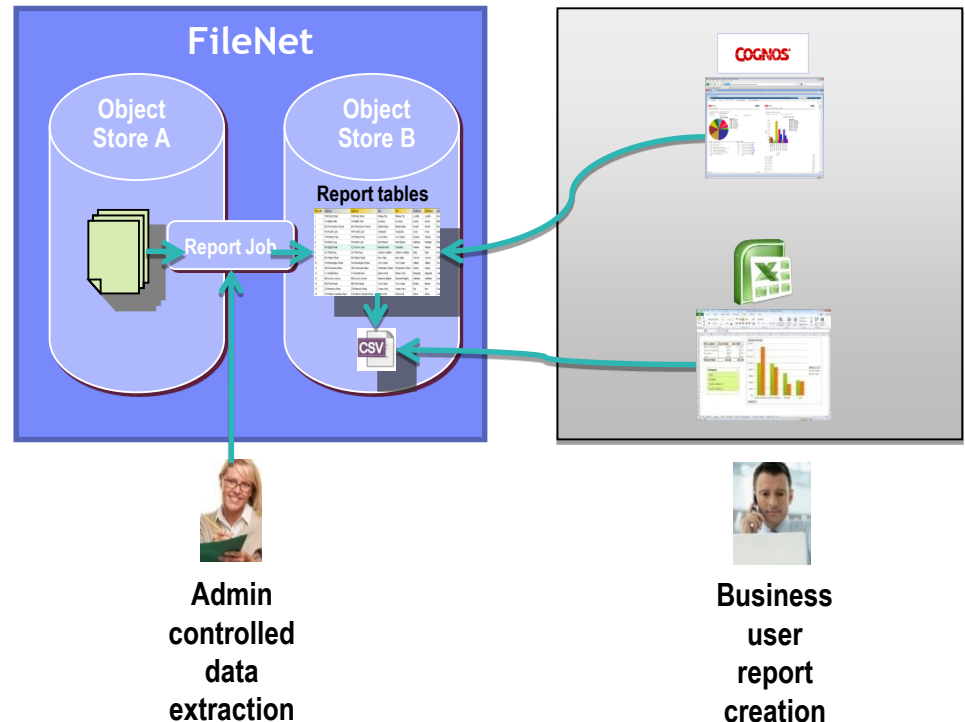

Client goal

As an IT owner or a business owner I need to report on content and activity in my repository on a regular basis

- Chargebacks
- Capacity planning
- Business unit and application
- Document age/usage

Client benefit

IT Administrators can respond to reporting needs with data extracts consumable from advanced reporting tools and from desktop applications

Storage replication

On-prem and cloud deployments can replicate content to reduce disaster recovery times

Client goal

As a system owner, I would like to design and deploy a backup / disaster recovery solution for my content that does not rely on hardware based replication

I also need to optimize storage for regional users

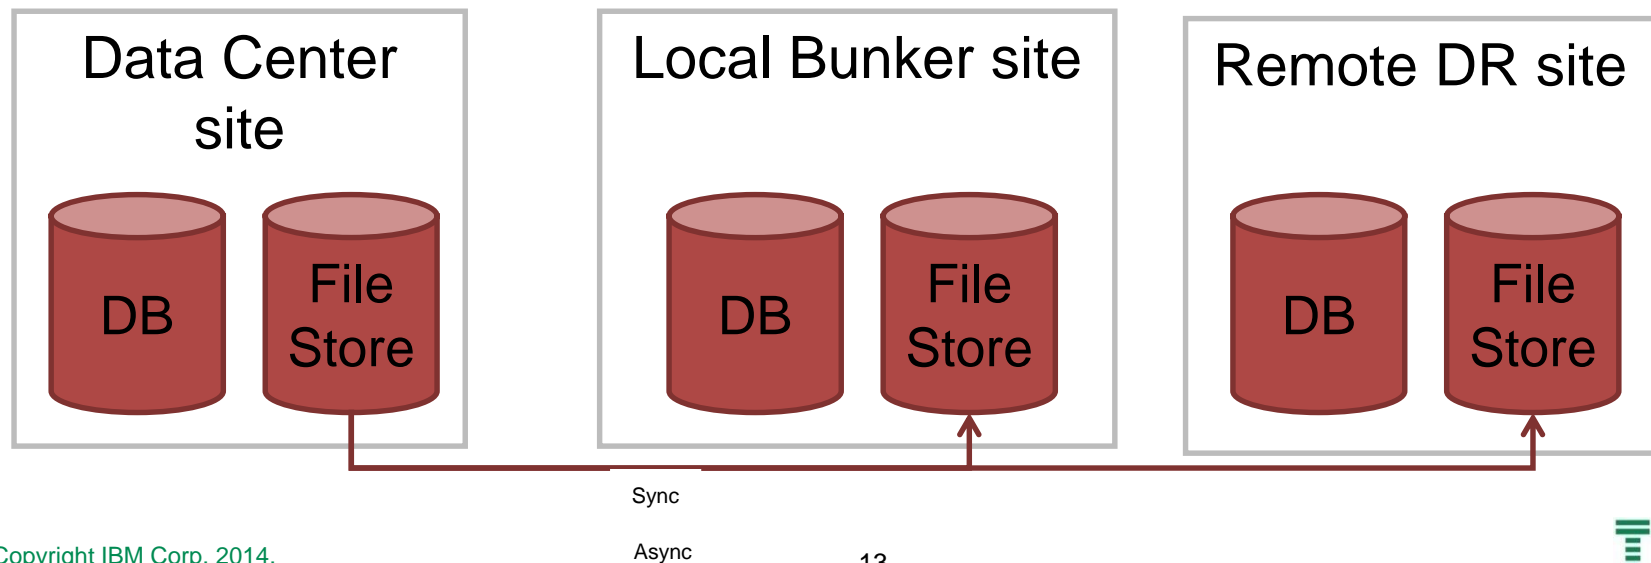

Benefits

More cost effective disaster recovery solution

Speeds failover recovery times

Mix storage types to suit the business needs

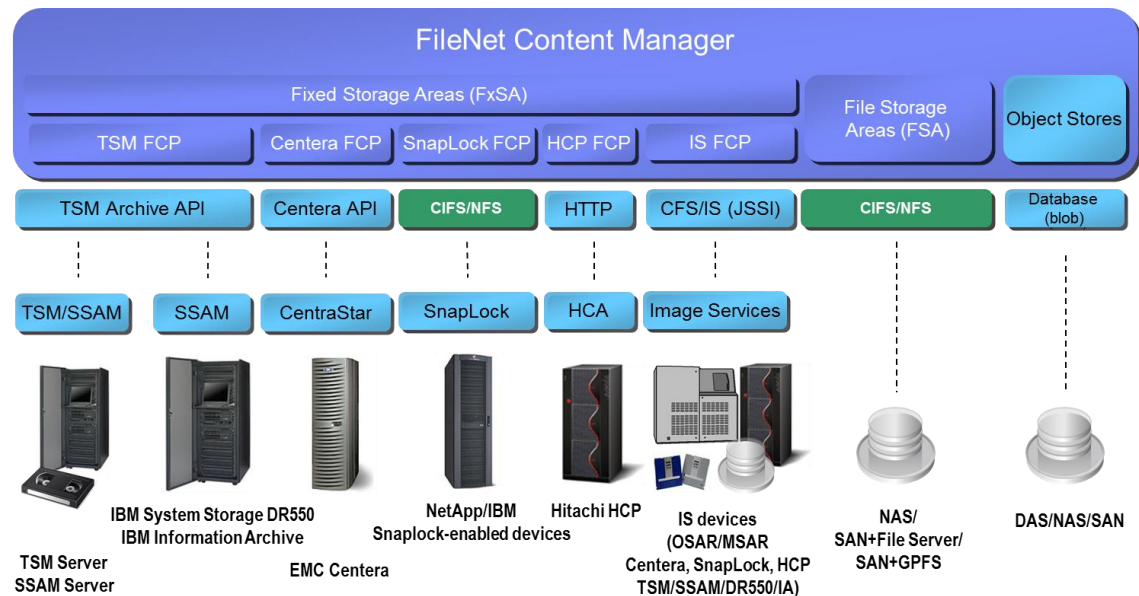

Active-active storage gives regional users high responsiveness for retrievals, adds and updates beyond caching

Expanding storage options

Supporting the latest storage devices and cloud storage with existing content migration capabilities

- IBM Softlayer storage
 - Not restricted to cloud hosted systems
 - Add as a storage type of on-prem ECM
 - Migrate content as needed to cheaper storage tier based on value and access
- EMC ATMOS
- EMC Isilon

Zero Downtime when applying Patch or Fix-Packs

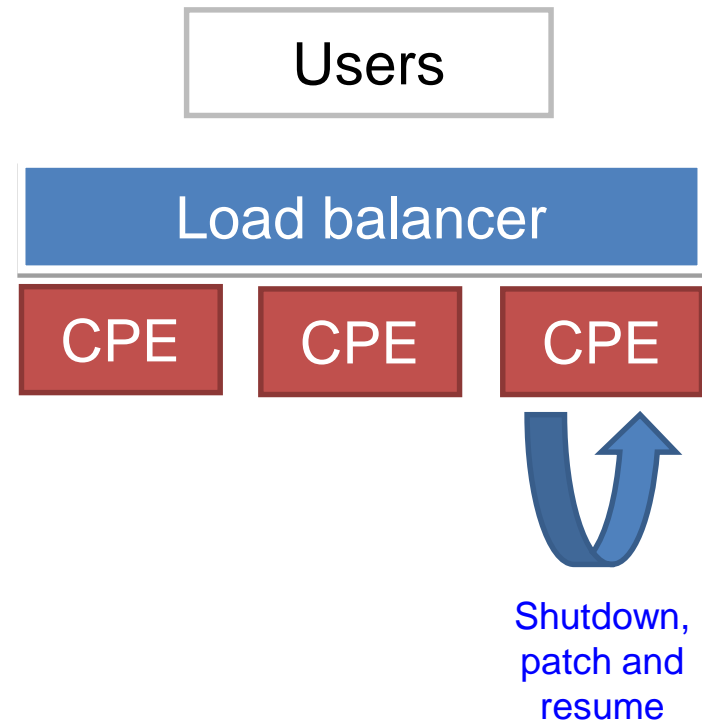

Customers requiring 7/24 operations apply fixpacks without planned downtime

Client goal

As a customer, I would like to deploy new fix packs and patches for FileNet Content Manager to my ECM environment, during production hours, without causing my users to experience a service outage.

Client benefit

Significant reduction in planned downtime. Ability to raise the SLA for ECM applications. Only full release upgrades still require planned outages

Multi-Domain Support

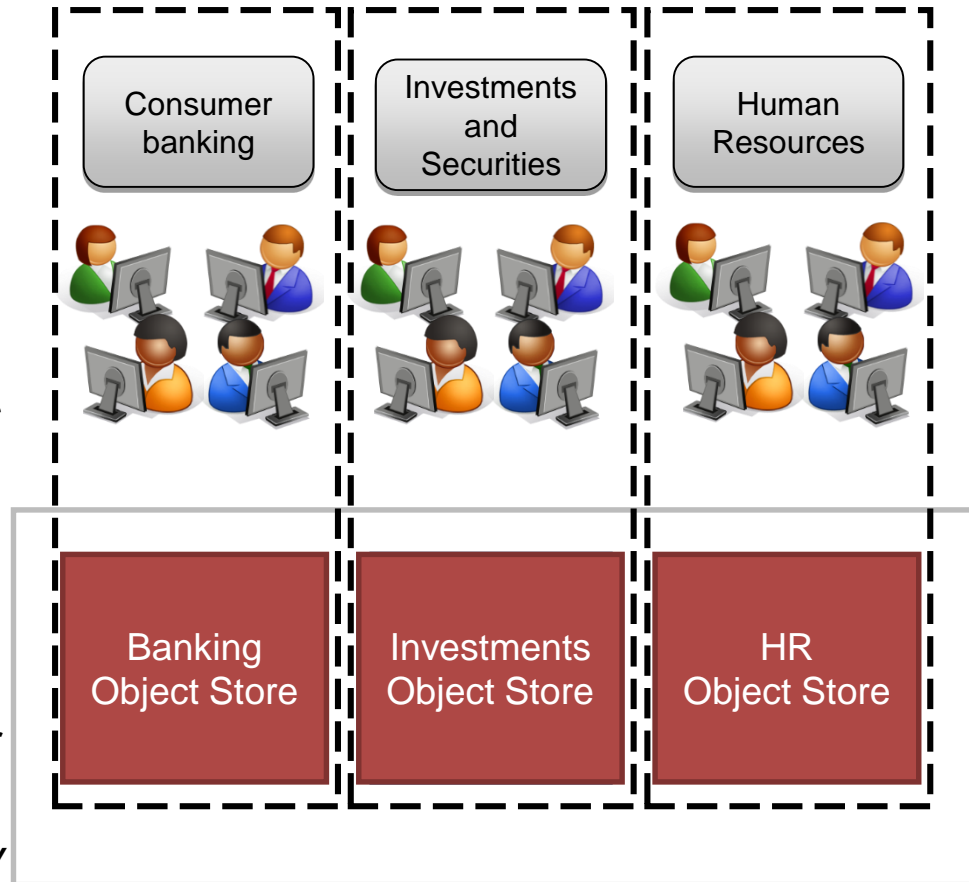

Supporting multiple business units or companies from a single system

Client goal

*As a customer, I need to provide services for multiple business units or companies from the same system while protecting both data **and** user visibility across business boundaries*

Client benefit

Cost and overhead are reduced by using a single infrastructure rather than maintaining a single system for each business unit or company

Automation of administration tasks

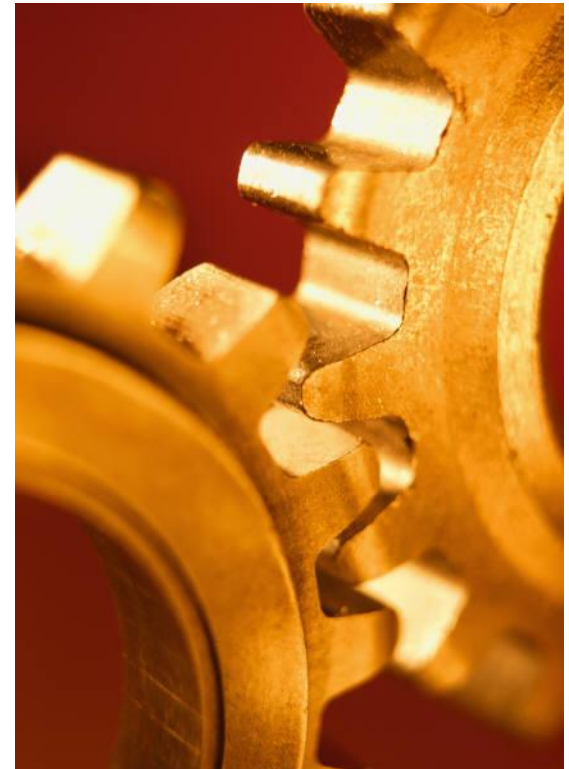

Schedule periodic maintenance

Client goal

As an administrator, I perform periodic maintenance on documents under management including data reorganization, cleanup, and other custom tasks specific to my implementation. I need to automate these tasks and, where possible, schedule them to run outside of user working hours

Client benefit

Custom tasks can be automated and scheduled across large sets of content. Tasks can be included as part of normal administration of the system using the OOTB browser based administration tools allowing administrators to perform their tasks from any location or workstation type.

Read-only role for ACCE

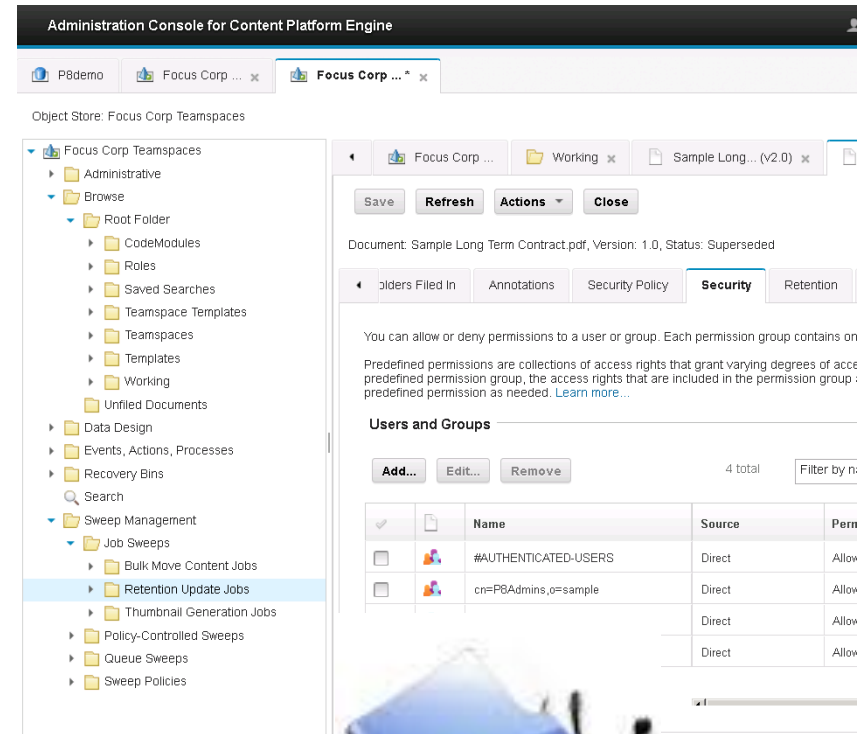

Control developer and support staff rights

Client goal

As a developer or support technician, I need access to repository information at a very detailed level to develop solutions or to resolve issues for users of an existing solution. Full access to ACCE (Administration Console for Content Platform Engine) provides this information but adds risk that I may change something with unintended consequences.

Client benefit

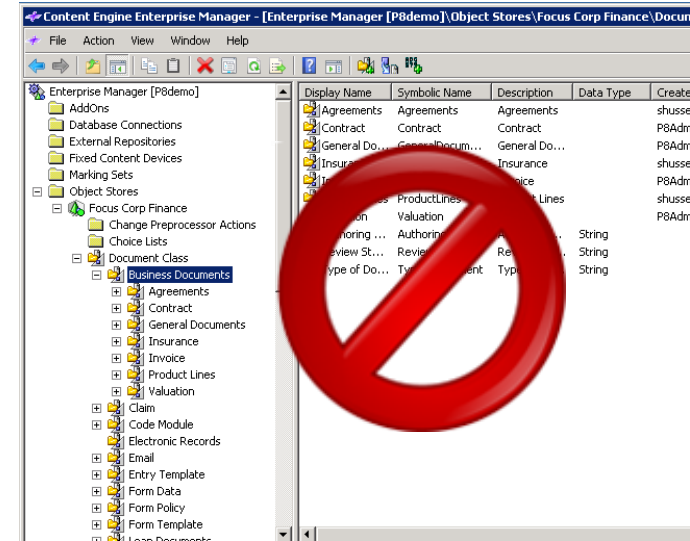

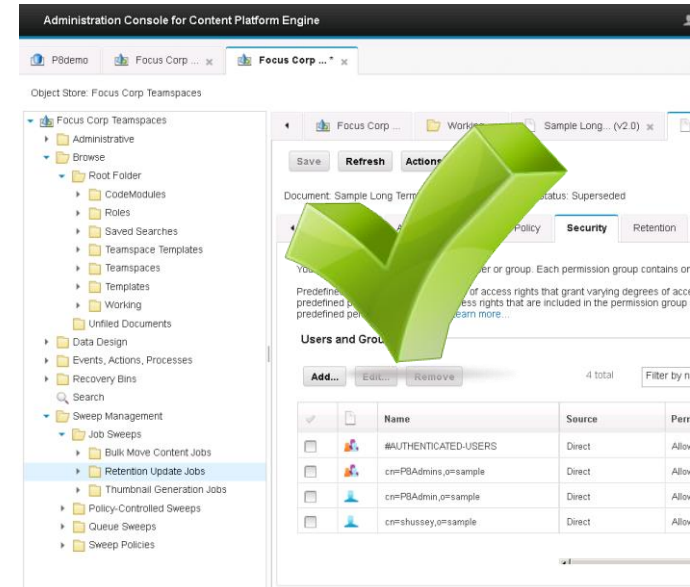

Users can be granted access to ACCE with read-only access rights, thereby ensuring that all information can be accessed by multiple developers and support staff without risk of solution breakage.

Administration moves to browser

FileNet Enterprise Manager discontinued

- FileNet Enterprise Manager (thick desktop admin) will not ship with this release
- Administration Console for Content Platform Engine (ACCE) is the browser based administration tool moving forward
- Note: Customers with procedures and policies documenting the use of FEM will have to change to use ACCE

Cloud Enablement

Report Enablement

EMC Storage: ATMOS Cloud Storage, Isilon

Storage Replication / Redundancy

Streaming Support

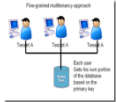

Continuous Availability

Read-Only Admin Access

Cloud Based Storage

Multi-Tenancy

Enterprise Manageability

Custom Sweep Operations

Content Access in a Distributed Environment

Administrative Enhancements

Compound Index Creation

WebSphere Security Domains

Portfolio and Solution Integration

IBM Connections Availability

IBM Docs Support

Subscription and Notifications

Case Foundation Enhancements

Event Log Scalability

Case Insensitive Search

Administrative Enhancements

Task Property Synchronization

Suspend/Resume Process

No Workplace XT Dependency

Globalization Support

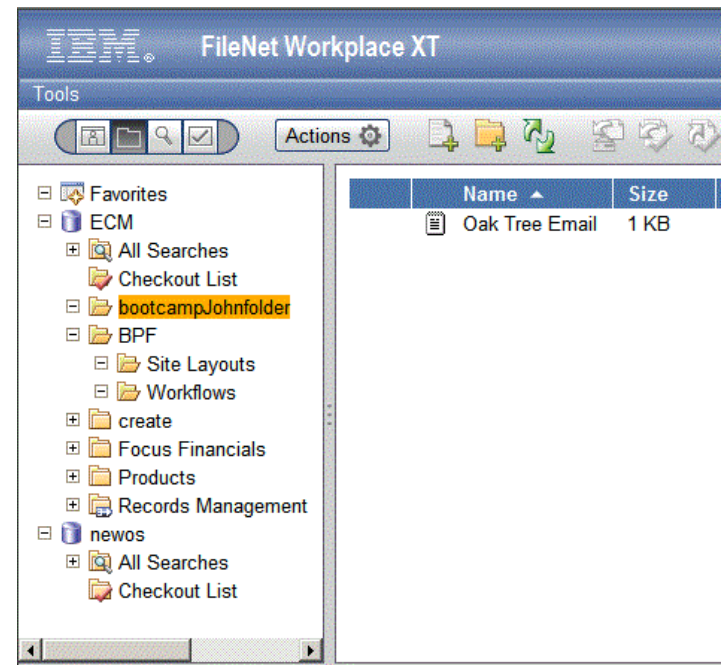

Requirements Summary	Supported	Comments
IBM Globalization Enablement Basic Support	Yes	
Translation to Group 1 Languages	Yes	Existing translation limitation still exists for FEM and System Dashboard. There are no plans to translate the installers for CPE, CSS, and CFS.
Translation to Group 2, 3, and 4 Languages	Group 2: Arabic, Catalan, Danish, Dutch, Finnish, Greek , Hebrew, Norwegian, Portuguese, Swedish, Thai, and Turkish. Group 3: Bulgarian, Croatian, Czech, Hungarian, Kazakh , Polish, Romanian, Russian, Slovak, Slovenian Group 4: Vietnamese*	Same as for Group 1 Languages. Languages in Blue are new for this release.
Worldwide Simultaneous GA	Yes	

* Vietnamese will be post qualified.

Deprecations

- **Workplace and Workplace XT are deprecated in this release**
 - Navigator is the recommended user experience
 - Start budgeting for application and user migration
 - Deploy Navigator and explore the benefits to your users
- **Deprecation is not withdrawal**
 - Deprecated capabilities continue to be supported for the full life cycle of the release
- Deprecation indicates that in a follow-on release the feature **may** be withdrawn
 - For example, the next release of a product may withdraw any previously deprecated feature
 - Deprecated features can continue to be included in later versions of products.

Deprecation Announcements

<u>Deprecated Feature</u>	<u>Rationale</u>	<u>Communication</u>
Workplace	IBM Content Navigator (ICN) is the strategic user experience platform for IBM ECM's portfolio going forward. Over time, ICN will become a functional replacement for WorkPlace and WorkPlace XT.	This deprecation announcement does <u>not</u> mean that these components have been removed from FileNet CM in the 5.2.1 release.
Workplace XT	IBM Content Navigator (ICN) is the strategic user experience platform for IBM ECM's portfolio going forward. Over time, ICN will become a functional replacement for WorkPlace and WorkPlace XT.	This deprecation announcement does <u>not</u> mean that these components have been removed from FileNet CM in the 5.2.1 release.
FileNet Integration for Microsoft Office (FIMO)	This functionality is now available through ICN. Customers are advised to use ICN's integration capabilities for Microsoft Office products going forward.	This deprecation announcement does <u>not</u> mean that these components have been removed from FileNet CM in the 5.2.1 release.

Deprecation Announcements

<u>Deprecated Feature</u>	<u>Rationale</u>	<u>Communication</u>
JBoss	This deprecation announcement cautions licensees that due to technical considerations, future releases of FileNet CM may no longer support JBoss.	This deprecation announcement does <u>not</u> mean that JBoss is not supported with FileNet CM in the 5.2.1 release.
SharePoint Web Parts	The functional capabilities of SharePoint Web Parts is now provided as part of Content Navigator v2.0.3 which is provided as a bundled component of FileNet CM 5.2.1	This deprecation announcement does <u>not</u> mean that these components have been removed from FileNet CM in the 5.2.1 release.
HP-UX	This deprecation announcement cautions licensees that due to lack of demand, future releases of FileNet CM may no longer run on HP-UX.	This deprecation announcement does <u>not</u> mean that HP-UX is not support with FileNet CM in the 5.2.1 release.

Removal Announcements

<u>Removed Feature</u>	<u>Rationale</u>	<u>Communication</u>
FileNet Enterprise Manager (FEM)	The functional capabilities of FileNet Enterprise Manager are being migrated to Administration Console for Content Platform Engine” (ACCE).	FileNet Enterprise Manager will be deprecated and removed from FileNet CM 5.2.1.

Upgrade

□ Content and Process Engines to Content Platform Engine 5.2.1 Upgrade Paths

Documentation changes and improvements

IBM Knowledge Center

- All documentation is now published solely on IBM Knowledge Center
 - **Search** across **product information** using Google Site Search (for GA on ibm.com) or Lucene (installed version).
 - **Save your searches.**
 - **Filter** content according to product, operating system, and task. More facets in future deliveries. Integration of our own DSWIPE tool for granular and extensive customized content in future.
 - **Save** topics or full product collections into your own collections. **Combine** with other saved topics or collections and **print** as PDF.
 - **Comment, rate, and share** topics.
 - **Simplified update** capabilities for installed information.
 - **Mobile reading** experience in future releases, including **offline reading**.
 - **Easy language switching** for full Knowledge Center or individual topics.
 - **Personalization** through IBM ID login.
 - **Secure** Knowledge Center for proprietary information.

Documentation changes and improvements

More guidance provided

- The Case Analyzer installation and upgrade guide has been improved. The reorganized guide provides installation scenarios to help you choose the steps that are needed.
- The documentation for the migration and deployment of FileNet P8 applications and data has been improved.
 - Additional information more fully describes the application migration and deployment model.
 - The procedures have been clarified and streamlined.
 - New information about the use of FileNet Deployment Manager to migrate data has been added.
